### 1.1 Background

E.g.: Brief description of the science, from a network-centric perspective.

### 1.2 Collaborators

E.g.: Listing of virtual organizations (VOs), facilities, or significant individual users/operators/leaders that participate in this collaboration or experiment. A rough estimate on the breadth and depth of the collaboration space (e.g. number of users, number of participating facilities, etc.) is also useful.

### 1.3 Key Local Science Drivers (e.g. Local Network aspects)

#### 1.3.1 Instruments and Facilities

Describe compute, storage, and network capabilities, any connections to any major scientific instruments (e.g. supercomputers, particle accelerators, tokamaks, genome sequencers, satellite data, computational clusters, storage systems etc.)

#### 1.3.2 Software Infrastructure

Describe the software used to manage the daily activities of the scientific process in the local environment. Please include tools that are used to locally manage data resources, facilitate the transfer of data sets from or to remote collaborators, or process the raw results into final and intermediate formats.

#### 1.3.3 Process of Science

Describe the process by which scientists use the instruments and facilities for knowledge discovery, emphasizing the role of networking in enabling the science.

### 1.4 Key Remote Science Drivers (e.g. Wide Area Network aspects, remote collaborators, data transfers)

#### 1.4.1 Instruments and Facilities

Describe remote access to or transfer of data from remote compute, storage, and network capabilities, any connections to any major scientific instruments (e.g. supercomputers, particle accelerators, tokamaks, genome sequencers, satellite data, computational clusters, storage systems etc.)
