

Mfn Standard As Substantive Treatment: Studien Zum Internationalen

The most-favoured-nation (MFN) standard is a cornerstone of international trade law. It requires states to treat all their trading partners equally, without discrimination. However, the MFN standard has also been interpreted as a substantive treatment standard, meaning that it can be used to challenge state measures that are not discriminatory but still have a negative impact on trade. This interpretation has been controversial, with some arguing that it goes beyond the original purpose of the MFN standard and creates uncertainty for businesses.

In this book, a team of leading scholars examines the MFN standard as a substantive treatment standard from a variety of perspectives. The essays in this volume explore the historical development of the MFN standard, its interpretation by international tribunals, and its implications for international trade law. The book also provides a comparative analysis of the MFN standard in different regional and international agreements.
