In the wake of the Black Lives Matter movement, there has been a renewed focus on race and racism in America. But even as the nation grapples with its racial history, there is a persistent belief that we are living in a "post-racial" society. This belief is often expressed in the idea of "colorblindness," the notion that we should ignore race and treat everyone as individuals.

But as the authors of *Seeing Race Again* argue, colorblindness is a myth. Race continues to shape our lives in profound ways, even if we don't always see it. Drawing on research from a variety of disciplines, the authors

show how race is embedded in our institutions, our culture, and our very psyches.

Seeing Race Again is a powerful indictment of colorblindness and a call for a more just and equitable society. The authors provide a comprehensive overview of the latest research on race and racism, and they offer concrete steps that we can all take to challenge racial inequality.
